1920 CENSUS—INDEX
DEPARTMENT OF COMMERCE
BUREAU OF THE CENSUS

4. **CONCLUSIONS** The results of this study indicate that the use of a single, standardized, and validated questionnaire can provide a reliable and valid measure of the prevalence of mental health problems in a community sample. The results also indicate that the prevalence of mental health problems is higher in the community than in the clinical setting. This finding is consistent with the results of other studies that have found that the prevalence of mental health problems is higher in the community than in the clinical setting. The results of this study also indicate that the use of a single, standardized, and validated questionnaire can provide a reliable and valid measure of the prevalence of mental health problems in a community sample. This finding is consistent with the results of other studies that have found that the prevalence of mental health problems is higher in the community than in the clinical setting.
